Best Local Similarity 57.0%; Pred. No. 1.3e-17; Matches 285; Conservative 0; Mismatches 199; Indels Sequence 2, Application US/08897340
Patent No. 5955306
GENERAL INFORMATION:
APPLICANT: Gimeno, Carlos J. and Errada, Patrick, R.
TITLE OF INVENTION: Weight Control Pathway Genes and ITLLE OF INVENTION: Therefor
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS: COMMUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25 1646

Patent No. 6500938

GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
ADDRESSE: INCYTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDIUM TYPE: Floppy disk

/destroyed); RNA source leukocytes from anonymous pool of non-activated adult donors. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.7 kb, insert size range 1.2-3.3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 027. Note: this is a NIH_MGC Library."

a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCG. The tissue was provided by Dr. Gary W. Huminghake of the University of Iowa.

/note="Organ: pooled brain, lung, testis; Vector:
pcWV-SPORT6; Site 1: Not1; Site 2: EccRV (destroyed); RNA pcWV-SPORT6; Site 1: Not1; Site 2: EccRV (destroyed); RNA source anonymous pool of 6 male brains, age range 23-27; 1 male lung, age 27; and 1 male testis, age 60. Library is oligo-dT primed and directionally cloned (BcoRV site is destroyed upon cloning). Average insert size 1:8 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 021. Note: this is a NIH_MGC Library."

UI-B-E01 is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
e179-806 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an Eook I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (d7)18 tail. The
sequence tags for this library are: fetal eyes,
AGAATCAAGA; coptic nerve, CCATTAAGTG; retina, CCGCG; Retina
Foveal and Macular, GTCG; RBE and Choroid, ACCTA. This
library was created for the program, Gene Discovery in the
Visual System, supported by National Eye Institute (NEI).

NCI_CGAP FILE a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCANGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of lowa.
